TEXAS INSTRUMENTS

LM341, LM78M05

SNVS090F – MAY 2004 – REVISED DECEMBER 2016

LM341 and LM78M05 Series 3-Terminal 500-mA Positive Voltage Regulators

1 Features

- Output Current in Excess of 0.5 A
- No External Components
- Internal Thermal Overload Protection
- Internal Short Circuit Current-Limiting
- Output Transistor Safe-Area Compensation
- Available in 3-Pin TO-220, TO-252, and TO packages
- Output Voltages of 5 V and 15 V

2 Applications

- Electronic Point-of-Sale
- Medical and Health Fitness Applications
- Printers
- Appliances and White Goods
- TVs and Set-Top Boxes

3 Description

The LM341 and LM78M05 three-pin positive voltage regulators employ built-in current limiting, thermal shutdown, and safe-operating area protection, which makes them virtually immune to damage from output overloads.

With adequate heat sinking, they can deliver in excess of 0.5-A output current. Typical applications would include local (on-card) regulators which can eliminate the noise and degraded performance associated with single-point regulation.

Device Information(1)

PART NUMBER	PACKAGE	BODY SIZE (NOM)
LM341	TO-220 (3)	10.16 mm × 14.986 mm
LM78M05	TO-220 (3)	10.16 mm × 14.986 mm
	TO-252 (3)	6.10 mm × 6.58 mm
	TO (3)	9.14 mm × 9.14 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision E (August 2005) to Revision F	Page
• Added *Applications* section, *Device Information* table, *Pin Configuration and Functions* section, *ESD Ratings* table, *Recommended Operating Conditions* table, *Thermal Information* table, *Detailed Description* section, *Application and Implementation* section, *Power Supply Recommendations* section, *Layout* section, *Device and Documentation Support* section, and *Mechanical, Packaging, and Orderable Information* section	1
• Deleted parts marked as obsolete: LM78M12 and LM78M15	1
• Changed package type names throughout	1
• Deleted 12-V output voltage option from *Features*	1
• Changed $R_{\theta JA}$ values in *Thermal Information* table From: 60°C/W To: 22.6°C/W (NDE), From: 92°C/W To: 38°C/W (NDP), and From: 120°C/W To: 162.4°C/W (NDT)	4
• Changed $R_{\theta JC(top)}$ values in *Thermal Information* table From: 5°C/W To: 17.8°C/W (NDE), From: 10°C/W To: 48.4°C/W (NDP), and From: 18°C/W To: 23.9°C/W (NDT)	4
• Updated *Thermal Considerations* section	13

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)(1)(2)

		MIN	MAX	UNIT
Input voltage	V_O = 5 V to 15 V		35	V
Power dissipation		Internally limited		
Lead temperature (Soldering, 10 s)	TO package (NDT)		300	°C
	TO-220 package (NDE)		260	
Operating junction temperature		–40	125	°C
Storage temperature, T_{stg}		–65	150	°C

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) If Military/Aerospace specified devices are required, please contact the Texas Instruments Sales Office/Distributors for availability and specifications.

6.2 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

	MIN	MAX	UNIT
Input voltage	V_{OUT} + 1.8	35	V
Output current		0.5	A

6.3 Thermal Information

THERMAL METRIC(1)		LM341	LM78M05		UNIT
		NDE (TO-220)	NDP (TO-252)	NDT (TO)	
		3 PINS	3 PINS	3 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	22.6	38	162.4	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	17.8	48.4	23.9	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	6	17.7	—	°C/W

$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	1.3	4.4	—	°C/W

(1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report.

6.4 Electrical Characteristics: LM341 (5 V) and LM78M05

V_{IN} = 10 V, C_{IN} = 0.33 µF, C_O = 0.1 µF, T_J = 25°C (unless otherwise noted). Limits are specified by production testing or correlation techniques using standard Statistical Quality Control (SQC) methods.

PARAMETER		TEST CONDITIONS		MIN	TYP	MAX	UNIT
V_O	Output voltage	I_L = 500 mA		4.8	5	5.2	V
		I_L = 5 mA to 500 mA, $P_D \le$ 7.5 W, V_{IN} = 7.5 V to 20 V, T_J = –40°C to 125°C		4.75	5	5.25	
V_{RLINE}	Line regulation	V_{IN} = 7.2 V to 25 V	I_L = 100 mA			50	mV
			I_L = 500 mA			100	
V_{RLOAD}	Load regulation	I_L = 5 mA to 500 mA				100	mV
I_Q	Quiescent current	I_L = 500 mA			4	10	mA
ΔI_Q	Quiescent current change	I_L = 5 mA to 500 mA				0.5	mA
		V_{IN} = 7.5 V to 25 V, I_L = 500 mA				1	
V_n	Output noise voltage	f = 10 Hz to 100 kHz			40		µV
ΔV_{IN}	Ripple rejection	f = 120 Hz, I_L = 500 mA			78		dB
V_{IN}	Input voltage required to maintain line regulation	I_L = 500 mA		7.2			V
ΔV_O	Long-term stability	I_L = 500 mA, T_J = –40°C to 125°C				20	mV/khrs

6.5 Electrical Characteristics: LM341 (12 V)

V_{IN} = 19 V, C_{IN} = 0.33 µF, C_O = 0.1 µF, T_J = 25°C (unless otherwise noted). Limits are specified by production testing or correlation techniques using standard Statistical Quality Control (SQC) methods.

PARAMETER		TEST CONDITIONS		MIN	TYP	MAX	UNIT
V_O	Output voltage	I_L = 500 mA		11.5	12	12.5	V
		I_L = 5 mA to 500 mA, $P_D \le$ 7.5 W, V_{IN} = 14.8 V to 27 V, T_J = –40°C to 125°C		11.4	12	12.6	
V_{RLINE}	Line regulation	V_{IN} = 14.5 V to 30 V	I_L = 100 mA			120	mV
			I_L = 500 mA			240	
V_{RLOAD}	Load regulation	I_L = 5 mA to 500 mA				240	mV
I_Q	Quiescent current	I_L = 500 mA			4	10	mA
ΔI_Q	Quiescent current change	I_L = 5 mA to 500 mA				0.5	mA
		V_{IN} = 14.8 V to 30 V, I_L = 500 mA				1	
V_n	Output noise voltage	f = 10 Hz to 100 kHz			75		µV
ΔV_{IN}	Ripple rejection	f = 120 Hz, I_L = 500 mA			71		dB
V_{IN}	Input voltage required to maintain line regulation	I_L = 500 mA		14.5			V
ΔV_O	Long-term stability	I_L = 500 mA, T_J = –40°C to 125°C				48	mV/khrs

6.6 Electrical Characteristics: LM341 (15 V)

V_{IN} = 23 V, C_{IN} = 0.33 µF, C_O = 0.1 µF, T_J = 25°C (unless otherwise noted). Limits are specified by production testing or correlation techniques using standard Statistical Quality Control (SQC) methods.

PARAMETER		TEST CONDITIONS		MIN	TYP	MAX	UNIT
V_O	Output voltage	I_L = 500 mA		14.4	15	15.6	V
		I_L = 5 mA to 500 mA, $P_D \le$ 7.5 W, V_{IN} = 18 V to 30 V, T_J = –40°C to 125°C		14.25	15	15.75	
V_{RLINE}	Line regulation	V_{IN} = 17.6 V to 30 V	I_L = 100 mA			150	mV
			I_L = 500 mA			300	
V_{RLOAD}	Load regulation	I_L = 5 mA to 500 mA				300	mV
I_Q	Quiescent current	I_L = 500 mA			4	10	mA
ΔI_Q	Quiescent current change	I_L = 5 mA to 500 mA				0.5	mA
		V_{IN} = 18 V to 30 V, I_L = 500 mA				1	
V_n	Output noise voltage	f = 10 Hz to 100 kHz			90		µV
ΔV_{IN}	Ripple rejection	f = 120 Hz, I_L = 500 mA			69		dB
V_{IN}	Input voltage required to maintain line regulation	I_L = 500 mA		17.6			V
ΔV_O	Long-term stability	I_L = 500 mA, T_J = –40°C to 125°C				60	mV/khrs

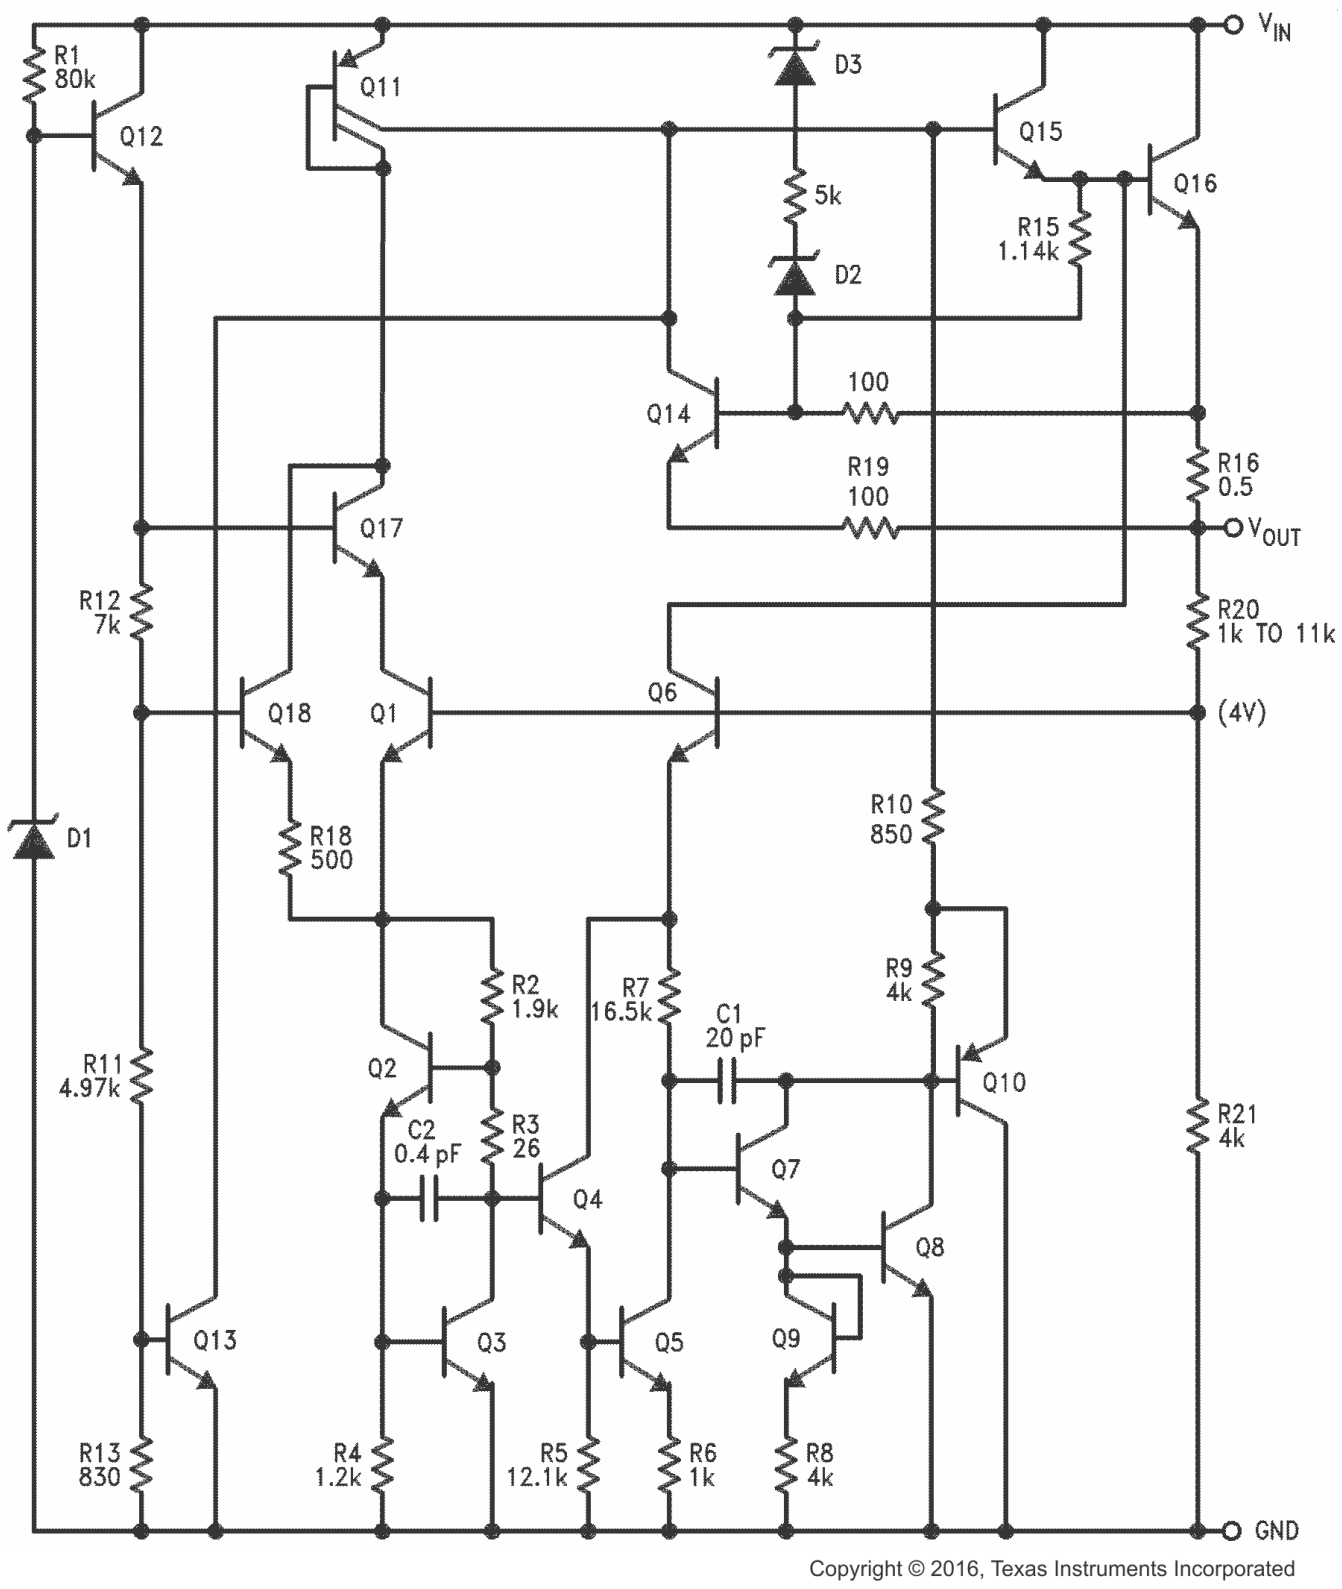
7 Detailed Description

7.1 Overview

The LM341 and LM78M05 devices are a family of fixed positive voltage regulators. They can accept up to 35 V at the input and regulate it down to outputs of 5 V, 12 V, or 15 V. The devices are capable of supplying up to 500 mA of output current, although it is important to ensure there is adequate heat sinking to avoid exceeding thermal limits. However, in the case of accidental overload the device has built in current limiting, thermal shutdown and safe-operating area protection to prevent damage from occurring.

7.2 Functional Block Diagram



7.3 Feature Description

The LM341 and LM78M05 fixed voltage regulators have built-in thermal overload protection which prevents the device from being damaged due to excessive junction temperature.

The regulators also contain internal short-circuit protection which limits the maximum output current, and safe-area protection for the pass transistor which reduces the short-circuit current as the voltage across the pass transistor is increased.

Although the internal power dissipation is automatically limited, the maximum junction temperature of the device must be kept below 125°C to meet data sheet specifications. An adequate heat sink must be provided to assure this limit is not exceeded under worst-case operating conditions (maximum input voltage and load current) if reliable performance is to be obtained.

7.4 Device Functional Modes

7.4.1 Normal Operation

The device OUTPUT pin sources current necessary to make the voltage at the OUTPUT pin equal to the fixed voltage level of the device.

7.4.2 Operation With Low Input Voltage

The device requires up to 2-V headroom ($V_I – V_O$) to operate in regulation. With less headroom, the device may drop out of regulation in which the OUTPUT voltage would equal INPUT voltage minus dropout voltage.

7.4.3 Operation in Self Protection

When an overload occurs, the device shuts down Darlington NPN output stage or reduce the output current to prevent device damage. The device automatically resets from the overload. The output may be reduced or alternate between on and off until the overload is removed.

8 Application and Implementation

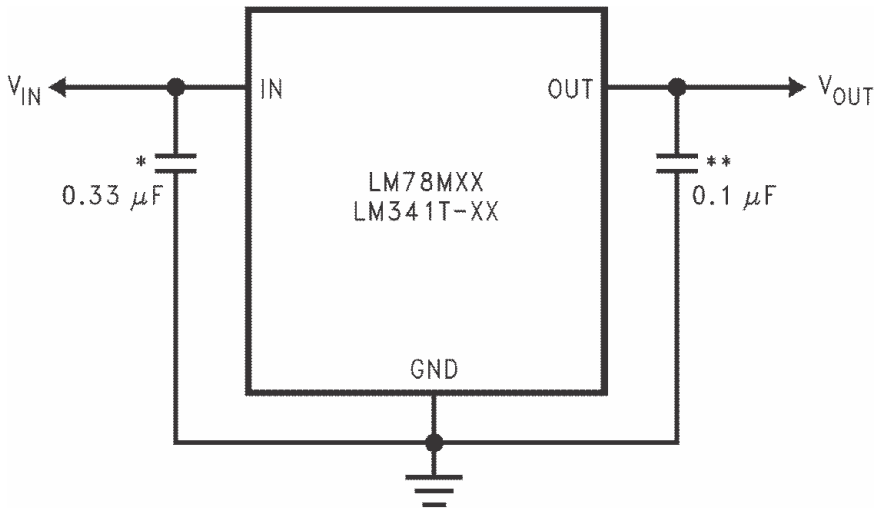
NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

8.1 Application Information

The LM341 and LM78Mxx devices are fixed voltage regulators meaning no external feedback resistors are required to set the output voltage. Input and output capacitors are also not required for the device to be stable. However input capacitance helps filter noise from the supply and output capacitance improves the transient response.

8.2 Typical Application



*Required if regulator input is more than 4 inches from input filter capacitor (or if no input filter capacitor is used).
**Optional for improved transient response.

Figure 11. Typical Application

8.2.1 Design Requirements

For this design example, use the parameters listed in Table 1 as the input parameters.

Table 1. Design Parameters

PARAMETER	VALUE
C_{IN}	0.33 µF
C_{OUT}	0.1 µF

8.2.2 Detailed Design Procedure

8.2.2.1 Input Voltage

Regardless of the output voltage option being used (5 V, 12 V, 15 V), the input voltage must be at least 2 V greater to ensure proper regulation (7 V, 14 V, 17 V).

8.2.2.2 Output Current

Depending on the input-output voltage differential, the output current must be limited to ensure maximum power dissipation is not exceeded. The graph in Figure 1 shows the appropriate current limit for a variety of conditions.

8.2.2.3 Input Capacitor

If no power supply filter capacitor is used or if the device is placed more than four inches away from the capacitor of the power supply, an additional capacitor placed at the input pin of the device helps bypass noise.

8.2.2.4 Output Capacitor

These devices are designed to be stable with no output capacitance and can be omitted from the design if needed. However if large changes in load are expected, an output capacitor is recommended to improve the transient response.

8.2.3 Application Curves

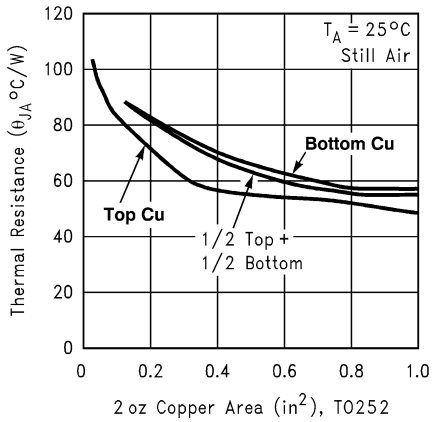


Figure 12. $R_{\theta JA}$ vs 2-oz Copper Area for PFM

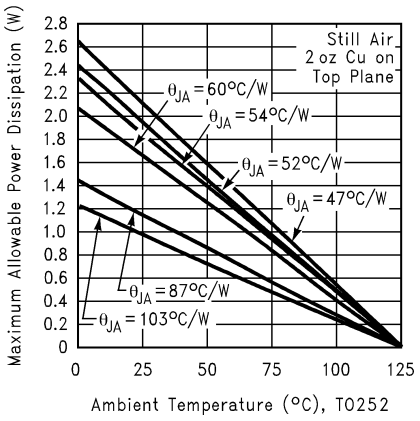

Figure 13. Maximum Allowable Power Dissipation vs Ambient Temperature for PFM

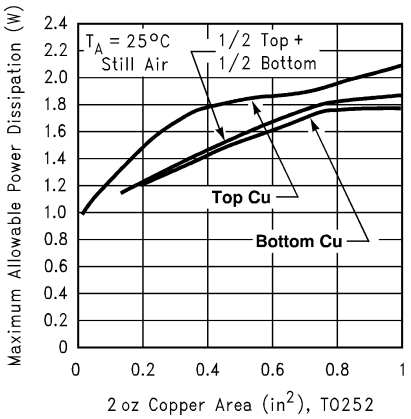

Figure 14. Maximum Allowable Power Dissipation vs 2-oz Copper Area for PFM

9 Power Supply Recommendations

The LM341 and LM78M05 devices are designed to operate from an input voltage supply range between V_{OUT} + 2 V to 35 V. If the device is more than four inches from the power supply filter capacitors, an input bypass capacitor 0.1-µF or greater of any type is recommended.

10 Layout

10.1 Layout Guidelines

Some layout guidelines must be followed to ensure proper regulation of the output voltage with minimum noise. TI recommends that the input terminal be bypassed to ground with a bypass capacitor. The optimum placement is closest to the input terminal of the device and the system GND. Take care to minimize the loop area formed by the bypass-capacitor connection, the input terminal, and the system GND. Traces carrying the load current must be wide to reduce the amount of parasitic trace inductance. In cases when VIN shorts to ground, an external diode must be placed from VOUT to VIN to divert the surge current from the output capacitor and protect the IC. This diode must be placed close to the corresponding IC pins to increase their effectiveness.

10.2 Layout Example

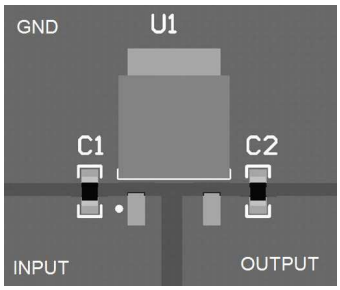

Figure 15. Layout Recommendation

10.3 Thermal Considerations

When an integrated circuit operates with appreciable current, its junction temperature is elevated. It is important to quantify its thermal limits to achieve acceptable performance and reliability. This limit is determined by summing the individual parts consisting of a series of temperature rises from the semiconductor junction to the operating environment. A one-dimension steady-state model of conduction heat transfer is demonstrated in Figure 16. The heat generated at the device junction flows through the die to the die attach pad, through the lead frame to the surrounding case material, to the printed-circuit board, and eventually to the ambient environment.

There are several variables that may affect the thermal resistance and in turn the need for a heat sink, which includes the following.

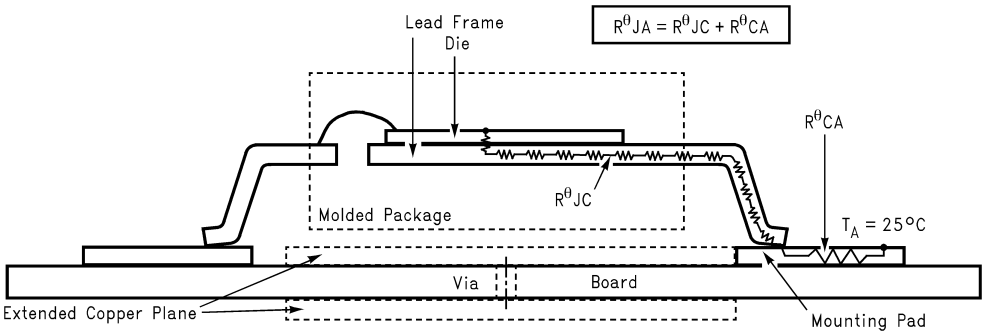
Component variables ($R_{\theta JC}$)

- Leadframe size and material
- Number of conduction pins
- Die size
- Die attach material
- Molding compound size and material

Application variables ($R_{\theta CA}$)

- Mounting pad size, material, and location
- Placement of mounting pad
- PCB size and material
- Traces length and width
- Adjacent heat sources
- Volume of air
- Ambient temperature
- Shape of mounting pad

Thermal Considerations (continued)



The case temperature is measured at the point where the leads contact the mounting pad surface

Figure 16. Cross-Sectional View of Integrated Circuit Mounted on a Printed-Circuit Board

The LM341 and LM78M05 regulators have internal thermal shutdown to protect the device from overheating. Under all possible operating conditions, the junction temperature of the LM341 and LM78M05 must be within the range of 0°C to 125°C. A heat sink may be required depending on the maximum power dissipation and maximum ambient temperature of the application. To determine if a heat sink is needed, the power dissipated by the regulator (P_D) is calculated using Equation 1.

$$I_{IN} = I_L + I_G \quad (1)$$

$$P_D = (V_{IN} - V_{OUT}) \times I_L + (V_{IN} \times I_G) \quad (2)$$

Figure 17 shows the voltages and currents which are present in the circuit.

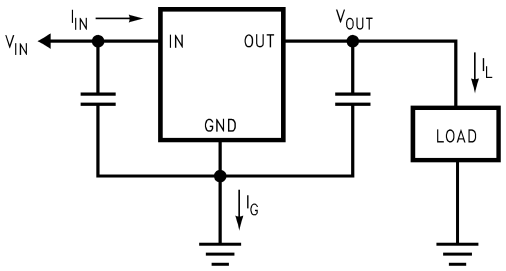


Figure 17. Power Dissipation Diagram

The next parameter which must be calculated is the maximum allowable temperature rise, $T_{R(MAX)}$.

$$T_{R(MAX)} = T_{J(MAX)} - T_{A(MAX)}$$

where

- $T_{J(MAX)}$ is the maximum allowable junction temperature (125°C)
- $T_{A(MAX)}$ is the maximum ambient temperature encountered in the application

Using the calculated values for $T_{R(MAX)}$ and P_D, the maximum allowable value for the junction-to-ambient thermal resistance ($R_{\theta JA}$) can be calculated with Equation 3.

$$R_{\theta JA} = T_{R(MAX)} / P_D \quad (3)$$

As a design aid, Table 2 shows the value of the $R_{\theta JA}$ of TO-252 for different heat sink area. The copper patterns that we used to measure these $R_{\theta JA}$ are shown at the end of *AN–1028 Maximum Power Enhancement Techniques for Power Packages* (SNVA036). Figure 12 reflects the same test results as what are in the Table 2.

Figure 13 shows the maximum allowable power dissipation versus ambient temperature for the PFM device. Figure 14 shows the maximum allowable power dissipation versus copper area (in^2) for the TO-252 device. For power enhancement techniques to be used with TO-252 package, see *AN–1028 Maximum Power Enhancement Techniques for Power Packages* (SNVA036).

Thermal Considerations (continued)

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

IMPORTANT NOTICE

Texas Instruments Incorporated (TI) reserves the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete.

TI's published terms of sale for semiconductor products (http://www.ti.com/sc/docs/stdterms.htm) apply to the sale of packaged integrated circuit products that TI has qualified and released to market. Additional terms may apply to the use or sale of other types of TI products and services.

Reproduction of significant portions of TI information in TI data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such reproduced documentation. Information of third parties may be subject to additional restrictions. Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyers and others who are developing systems that incorporate TI products (collectively, "Designers") understand and agree that Designers remain responsible for using their independent analysis, evaluation and judgment in designing their applications and that Designers have full and exclusive responsibility to assure the safety of Designers' applications and compliance of their applications (and of all TI products used in or for Designers' applications) with all applicable regulations, laws and other applicable requirements. Designer represents that, with respect to their applications, Designer has all the necessary expertise to create and implement safeguards that (1) anticipate dangerous consequences of failures, (2) monitor failures and their consequences, and (3) lessen the likelihood of failures that might cause harm and take appropriate actions. Designer agrees that prior to using or distributing any applications that include TI products, Designer will thoroughly test such applications and the functionality of such TI products as used in such applications.

TI's provision of technical, application or other design advice, quality characterization, reliability data or other services or information, including, but not limited to, reference designs and materials relating to evaluation modules, (collectively, "TI Resources") are intended to assist designers who are developing applications that incorporate TI products; by downloading, accessing or using TI Resources in any way, Designer (individually or, if Designer is acting on behalf of a company, Designer's company) agrees to use any particular TI Resource solely for this purpose and subject to the terms of this Notice.

TI's provision of TI Resources does not expand or otherwise alter TI's applicable published warranties or warranty disclaimers for TI products, and no additional obligations or liabilities arise from TI providing such TI Resources. TI reserves the right to make corrections, enhancements, improvements and other changes to its TI Resources. TI has not conducted any testing other than that specifically described in the published documentation for a particular TI Resource.

Designer is authorized to use, copy and modify any individual TI Resource only in connection with the development of applications that include the TI product(s) identified in such TI Resource. NO OTHER LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE TO ANY OTHER TI INTELLECTUAL PROPERTY RIGHT, AND NO LICENSE TO ANY TECHNOLOGY OR INTELLECTUAL PROPERTY RIGHT OF TI OR ANY THIRD PARTY IS GRANTED HEREIN, including but not limited to any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information regarding or referencing third-party products or services does not constitute a license to use such products or services, or a warranty or endorsement thereof. Use of TI Resources may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

TI RESOURCES ARE PROVIDED "AS IS" AND WITH ALL FAULTS. TI DISCLAIMS ALL OTHER WARRANTIES OR REPRESENTATIONS, EXPRESS OR IMPLIED, REGARDING RESOURCES OR USE THEREOF, INCLUDING BUT NOT LIMITED TO ACCURACY OR COMPLETENESS, TITLE, ANY EPIDEMIC FAILURE WARRANTY AND ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF ANY THIRD PARTY INTELLECTUAL PROPERTY RIGHTS. TI SHALL NOT BE LIABLE FOR AND SHALL NOT DEFEND OR INDEMNIFY DESIGNER AGAINST ANY CLAIM, INCLUDING BUT NOT LIMITED TO ANY INFRINGEMENT CLAIM THAT RELATES TO OR IS BASED ON ANY COMBINATION OF PRODUCTS EVEN IF DESCRIBED IN TI RESOURCES OR OTHERWISE. IN NO EVENT SHALL TI BE LIABLE FOR ANY ACTUAL, DIRECT, SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF TI RESOURCES OR USE THEREOF, AND REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Unless TI has explicitly designated an individual product as meeting the requirements of a particular industry standard (e.g., ISO/TS 16949 and ISO 26262), TI is not responsible for any failure to meet such industry standard requirements.

Where TI specifically promotes products as facilitating functional safety or as compliant with industry functional safety standards, such products are intended to help enable customers to design and create their own applications that meet applicable functional safety standards and requirements. Using products in an application does not by itself establish any safety features in the application. Designers must ensure compliance with safety-related requirements and standards applicable to their applications. Designer may not use any TI products in life-critical medical equipment unless authorized officers of the parties have executed a special contract specifically governing such use. Life-critical medical equipment is medical equipment where failure of such equipment would cause serious bodily injury or death (e.g., life support, pacemakers, defibrillators, heart pumps, neurostimulators, and implantables). Such equipment includes, without limitation, all medical devices identified by the U.S. Food and Drug Administration as Class III devices and equivalent classifications outside the U.S.

TI may expressly designate certain products as completing a particular qualification (e.g., Q100, Military Grade, or Enhanced Product). Designers agree that it has the necessary expertise to select the product with the appropriate qualification designation for their applications and that proper product selection is at Designers' own risk. Designers are solely responsible for compliance with all legal and regulatory requirements in connection with such selection.

Designer will fully indemnify TI and its representatives against any damages, costs, losses, and/or liabilities arising out of Designer's non-compliance with the terms and provisions of this Notice.
