#### Driver Inputs Compatible with TTL and MOS Circuitry

- Driver Outputs Stay Off During Power Up and Power Down
- Drivers Feature Open-Collector Outputs for Party-Line Operation
- Designed for Interchangeability with Motorola MC3446
- Meet IEEE Standard 488-1975

#### description

These circuits are quadruple single-ended line transceivers designed for bidirectional flow of data and instructions. The bus terminal characteristic complies with paragraph 3.5.3 of IEEE Standard 488 (see Figure 3). Each driver output is tied to the junction of an internal voltage divider that sets the no-load output voltage and provides bus termination. The driver outputs are guaranteed to be "off" during power up and power down if either input is high. The receivers feature 950 millivolts typical hysteresis for noise immunity.

The MC3446 is characterized for operation from 0  $^{\circ}\mathrm{C}$  to 70  $^{\circ}\mathrm{C}.$

### MC3446 QUADRUPLE BUS TRANSCEIVER

## T-52-31

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)

Supply voltage, VCC (see Note 1) 7 V
Input voltage
Driver output current 150 mA
Continuous total dissipation at (or below) 25 °C free-air temperature (see Note 2):
D package
J package
N package
Operating free-air temperature range
Storage temperature range65°C to 150°C
Lead temperature 1,6 mm (1/16 inch) from case for 60 seconds: J package 300 °C
Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds: D and N package 260 °C

NOTES: 1. Voltage values are with respect to network ground terminal.
2. For operation above 25 °C free-air temperature, refer to Dissipation Derating Curves in Appendix A. In the J package, use the 8.2 mW/°C curve, in the D package, use the 7.6 mW/°C curve, and in the N package, use the 9.2-mW/°C curve.

recommended operating conditions

	-	MIN	NOM	MAX	UNIT
